# Preface

**Staff Selection Commission-Junior Engineer** has always been preferred by Engineers due to job stability. SSC-Junior Engineer examination is conducted every year. MADE EASY team has deeply analyzed the previous exam papers and observed that a good percentage of questions are repetitive in nature, therefore it is advisable to solve previous years papers before a candidate takes the exam.

The SSC JE texam is conducted in two stages as shown in table given below.

Papers	Subject	Maximum Marks	Duration
<b>Stage 1:</b> Paper-I : Objective Type	(i) General Intelligence & Reasoning	50 Marks	2 hours
	(ii) General Awareness	50 Marks	
	(iii) General Engineering : Electrical/Mechanical/Civil	100 Marks	
<b>Stage 2:</b> Paper-II : Objective Type	General Engineering : Electrical/Mechanical/Civil	300 Marks	2 hours

## Syllabus Paper-I

- (i) **General Intelligence & Reasoning:** The Syllabus for General Intelligence would include questions of both verbal and non-verbal type. The test may include questions on analogies, similarities, differences, space visualization, problem solving, analysis, judgement, decision making, visual memory, discrimination, observation, relationship concepts, arithmetical reasoning, verbal and figure classification, arithmetical number series etc. The test will also include questions designed to test the candidate's abilities to deal with abstract ideas and symbols and their relationships, arithmetical computations and other analytical functions.
- (ii) **General Awareness:** Questions will be aimed at testing the candidate's general awareness of the environment around him/her and its application to society. Questions will also be designed to test knowledge of current events and of such matters of everyday observations and experience in their scientific aspect as may be expected of any educated person. The test will also include questions relating to India and its neighbouring countries especially pertaining to History, Culture, Geography, Economic Scene, General Polity and Scientific Research, etc. These questions will be such that they do not require a special study of any discipline.

**Note:** In Paper-I, every question carry one mark and there is negative marking of  $\frac{1}{4}$  marks for every wrong answer. Candidates shortlisted in Stage 1 are called for Stage 2. On the basis of combined score in Stage 1 and Stage 2, final merit list gets prepared.

MADE EASY has taken due care to provide complete solution with accuracy. Apart from Staff Selection Commission-Junior Engineer, this book is also useful for Public Sector Examinations and other competitive examinations for engineering graduates.

I have true desire to serve student community by providing good source of study and quality guidance. Any suggestion from the readers for improvement of this book is most welcome.

The following are the thermal conductivity of the given options in W/mK (Watts per metre Kelvin):  
 Water (at 20°C) – 0.6  
 Mercury – 8.4  
 Alcohol (highest among methyl, ethyl and propyl) – 0.2  
 Ether – 0.13

2. (c)

The ionosphere is ionized by solar radiation. The

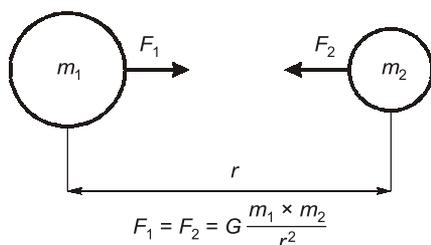

ionization of gas particles in the ionosphere aids in the transmission of radio waves by reflecting waves back to Earth, rather than allowing them to escape the atmosphere.

3. (d)

The net weight of the body in a fluid can be given as the actual weight of the body (unit weight of the material × volume of the body) subtracted by the buoyancy (unit weight of the fluid × volume of the body into the fluid).

**4. (b)**

Newton's law of universal gravitation states that a particle attracts every other particle in the universe using a force that is directly proportional to the product of their masses and inversely proportional to the square of the distance between their centres.

**5. (a)**

Work done = Force  $\times$  Distance moved in the direction of force.

Since in this case the body is just been hold (neither lifted nor dropped), hence the distance moved is zero. Therefore, the work done is zero.

**6. (b)**

The length of the day is dependent on the rotation of the earth and not on the atmosphere.

**7. (a)**

Known as the sunshine vitamin, vitamin D is produced by the body in response to skin being exposed to sunlight. Vitamin D is essential for strong bones, because it helps the body use calcium from the diet. Traditionally, vitamin D deficiency has been associated with rickets in children, a disease in which the bone tissue doesn't properly mineralize, leading to soft bones and skeletal deformities.

Deficiency of Vitamin D leads to osteomalacia in adults.

**8. (c)**

The chemical process for converting natural rubber into more durable materials by the addition of sulphur is known as vulcanization of rubber.

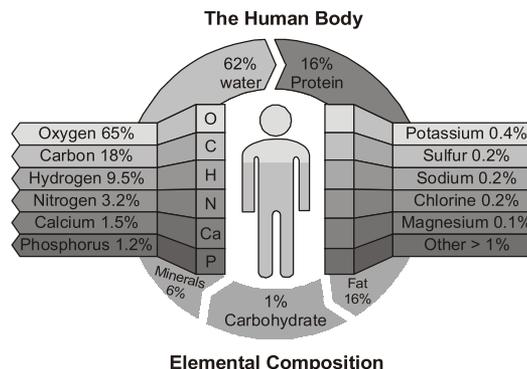

Advantages of Vulcanized rubber:

- It has good tensile strength and extensibility.
- Excellent resilience i.e. it returns to the original shape, when the deforming load is removed.

- Low water absorption tendency.
- Higher resistance to oxidation, wear and tear abrasion.
- Better electrical insulator.
- It is resistant to organic solvents (petro, benzene), fats and oils.
- It has higher useful temperature range unlike uncured rubber which becomes soft at high temperature ( $>335\text{K}$ ) and brittle at low temperatures ( $<283\text{K}$ )

**9. (b)**

Plasma, which is 92 percent water, constitutes 55 percent of blood volume. Plasma contains albumin (the chief protein constituent), fibrinogen (responsible, in part, for the clotting of blood), and globulins (including antibodies).

**11. (b)**

In computer architecture, a register is a quickly accessible location available to a computer's central processing unit (CPU). Registers usually consist of a small amount of fast storage.

**14. (b)**

Sangeetha's age = 10

$$\therefore \text{Pooja's age} = 3 \times \text{Sangeetha's age} \\ = 3 \times 10 = 30$$

$$\text{Santosh age} = \text{Pooja's age} + 5 \\ = 30 + 5 = 35$$

When, Sangeetha was born (i.e. 10 yrs ago),  
Santosh age =  $35 - 10 = 25$  years

8. Select the option in which the given figure is embedded (rotation is NOT allowed).

## Explanations

**2. (c)**

$$16 * 4 * 22 * 2 * 5 = 58$$

After applying sign

$$\Rightarrow 16 \times 4 - 22 \div 2 + 5$$

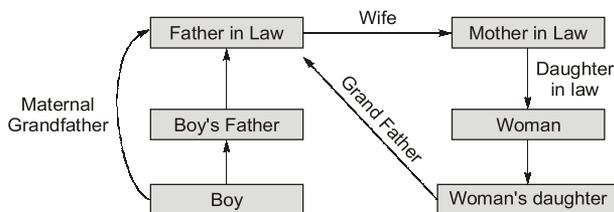

Apply BODMAS rule

$$\Rightarrow 16 \times 4 - 11 + 5$$

$$\Rightarrow 64 - 6 = 58$$

**4. (b)**

The possible relationship diagram is

From the above diagram it can be concluded that Woman is the Daughter in law of boy's Father's mother in law.

**5. (a)**

Cost price of the bicycle for Ragini

$$= \frac{5362.56}{114} \times 100$$

$$= \text{Rs. } 4704$$

Cost price of the bicycle for Mangesh

$$= \frac{4704}{112} \times 100$$

$$= \text{Rs. } 4200$$

**6. (a)**

$$18 \times (18 - 1) = 18 \times 17 = 306$$

Similarly,

$$23 \times (23 - 1) = 23 \times 22 = 506$$

**7. (d)**

Seismograph is the instrument used to measure Earthquake, similarly Udometer is to measure rain.

Let the current age of Arun is  $x$  years and Bidan is  $y$  years.

Then,  $x + 7 = y - 4$

$y = x + 11$

After 10 years, the ages of Arun, Bidan and Charan are  $x + 10$ ,  $x + 21$  and 12 years.

Then,  $\frac{x + 10 + x + 21 + 12}{3} = 33$

$2x + 43 = 99$

$x = 28$  years
